SHIELDGate
Verify Every Access

Zero-Trust Secure Remote Access Service with Conditional Access Policy

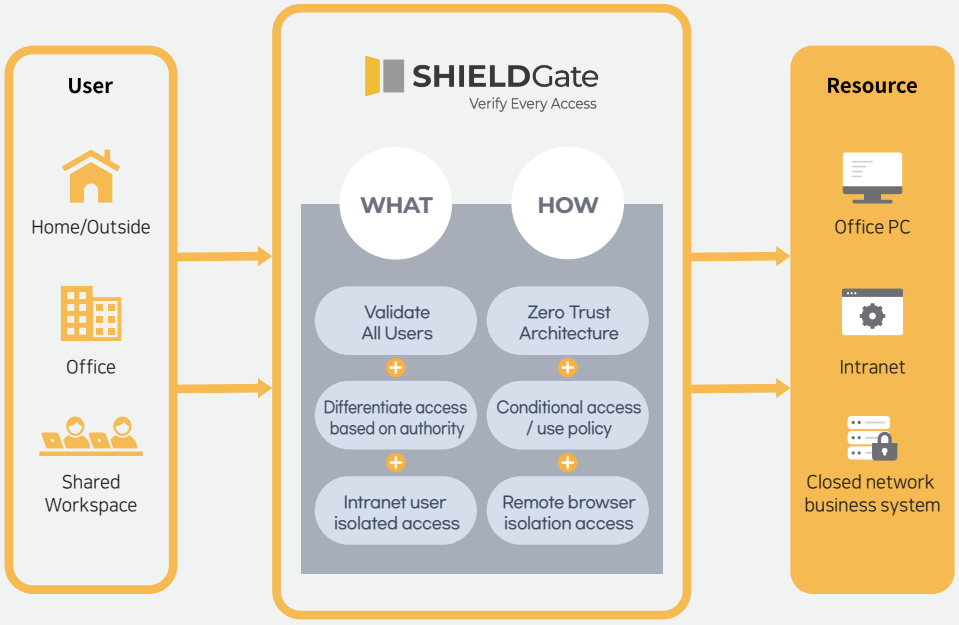

SHIELDGate is a remote access service that enables zero-trust architecture without replacing existing intranet systems

Zero Trust Conditional Access(ZTCA)-based security service with conditional access and use policies that can protect intranet systems from connections from untrusted devices through remote browser isolation.

Zero Trust Architecture

Users connect to on-premises resources through an existing web browser instead of a VPN.

Experience optimal security and convenience with access through SHIELDGate, which uses zero-trust principles for all resources.

Verify Every Access

Continuously validate all access to on-premises resources and provide per-user access to prevent unauthorized use, allowing administrators to manage work system and permissions.

Browser Isolated Access

By physically isolating the user's search activities and related risks when accessing the work system, users can safely access the intranet in the internal and closed network environments even with devices infected with malicious codes.

SHIELDGate

Remote access without replacing existing intranet systems

Users can access office PC and intranet without changing internal work system.
Remote work from any personal spaces (ex. Cafe, Shared office) is available.

Clientless Services

Remote access to existing intranet systems is possible with only a web browser without installing a separate client.
Access work system anytime, anywhere without installing a program, providing a convenient user experience without taking up spaces.
